

The Matanzas Basin offers a unique planning opportunity because about 60 percent of the basin is publically owned and about 90 percent is undeveloped. The Matanzas Basin is one of Florida's most valuable and threatened coastal areas, and is home to a wide range of species, making it an important area for our attention.

This map highlights the study area for this planning project. From St. Augustine to Flagler Beach, this area is a unique place to focus on community, environment, and our legacy.

Our project goal is to work with Matanzas Basin stakeholders to plan for sea level rise in a way that protects communities and the environments they depend on for quality of life and commerce.

Planning for Sea Level Rise in the Mantanzas Basin
